

Waikato Respiratory Virus Report

Week 18 2020

Week to 3 May 2020

We are now returning to testing a few samples for the usual respiratory viruses, Influenza and RSV. It's not yet the time of year when we would expect to see many of these winter viruses, but it is notable that we have had no positives for the past 4 weeks.

In the Waikato region, we found just one new person with SARS-CoV-2 infection last week (27 Apr - 3 May) from 2558 samples tested.
